## **DETAILED ACTION**

### ***Information Disclosure Statement***

1. The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609 A(1) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered.

### ***Claim Objections***

2. Claim 6 is objected to because of the following informalities: In line 1 of claim 6, replace "one of claims" with --claim--. Appropriate correction is required.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000.

Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

4. Claims 1-6 and 8-11 are rejected under 35 U.S.C. 102(e) as being anticipated by Tajima et al. (U.S. Patent No. 6,604,266).

In reference to claim 1, Tajima discloses in Figure 8 an oscillator circuit comprising: at least one resonator (11,12); and at least one load impedance (4) connected to the resonator (11, 12), the loads impedance (4) having at least one structure (C) which may be machined by means of high-energy radiation to trim the resonant characteristics of the oscillator circuit, see ABSTRACT. The same applies to claims 3, 8, 10, and 11.

In reference to claim 2, Tajima discloses in column 2, lines 30-35 that the high-energy radiation is laser radiation. The same applies to claim 9.

In reference to claim 4, Tajima discloses in Figure 8 wherein the capacitor (C) comprises a monolithic base member of a dielectric material and at least one electrode arranged on an externally accessible surface of the base member, such that the capacitance may be reduced by removing at least part of the electrode (see column 8, lines 30-48).

In reference to claim 5, Tajima discloses in Figure 8 that the load impedance (4) is a surface mountable component.

In reference to claim 6, it is considered well-known to one skilled in the art that resonator can be formed as striplines for the advantage of producing a resonator with a high Q factor.

***Allowable Subject Matter***

5. Claim 7 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

6. The following is a statement of reasons for the indication of allowable subject matter: Claim 7 would be allowable because the closest prior art of record fails to disclose a circuit as shown in Figure 5 wherein the stripline (101) comprises a looped structure and the load impedance (102) is electrically connected within a central area of the stripline (101) in combination with the rest of the limitations of the base claims and any intervening claims.
